

Chapter 1 – where we are knocking the door of wisdom

Compiler vs Interpreter

Semantic Versioning -> major - minor - patch version

String Len and index

String 44 Methods

Comments -> one-line and multi-line

5 Rules of naming variables.

Type casting

Chapter 2 – where Hardship comes our way

An introduction to numbers and different number systems.

Working with binary

Numbers and different methods

Operators (comparison⁶, assignment¹⁴, bitwise⁶, arithmetic⁷)

Precedence order

Complex and Floating point numbers

Chapter3 – Where we start making sense of sequences

Sequences in python

List and it's methods – Three Musketeers : filter , reduce, map

Sequence indexing - tuple and it's different way of living

Chapter4 – where delusion of power overwhelms us

If statement – statement? Expression? What's the difference?

Set and it's methods

Object references, mutability, references

Datetime library

Chapter5 – Where automation comes to the rescue

For loop

Zip function

Itertools library

Ord and Chr functions

Chapter6 – where we are spinning in circles or at least we think

Dictionary and it's methods

Default Dict

Ordered Dict

While loop

Chapter7 – Where we wanna store everything

Work with Txt files

Json file - Csv file – Import ... as

Chapter8 – where additional help is needed.

Math, random, Time, collections

Encode vs decode

Functions introduction

NameSpace and Scope

Chapter9 – Where everyone bets on us

Functions

Type hinting

Match / Case

Chapter10 – First visit with the last boss

OOP

Object and class in python

Class and instance variables

Class and static and instance methods

Inheritance

Single level and multi-level inheritance

Chapter11 – The last Dance

MRO

Method overloading

Operator overriding

Polymorphism

Encapsulation
